

The OBO proQuick clip

Flexible, user-friendly, efficient

Saves time in a wide range of applications

Presenting the optimised successor to the starQuick clip: The proQuick clip is setting new benchmarks in the fastening of Quick pipe electrical installation pipes as well as electrical and installation pipes made of plastic and metal. It offers simple, flexible mounting options for a wide range of applications, in both indoor and protected outdoor areas.

Advantages of the proQuick clip at a glance:

- User-friendly design for quick mounting
- Tool-free clip lock saves time
- Can be used in a wide range of applications
- Offers flexibility, efficiency and safety

Wide range of uses.

The proQuick clip is suitable for walls, ceilings and steel structures, such as cable trays and profile rails. It supports pipe diameters of 10 to 65 mm and can be lined up together up to a diameter of 32 mm. In a certain size range, it is also possible to combine the clip with OBO Quick and Multi-Quick clips.

Fast fastening thanks to clip lock.

The proQuick clip is characterised by its tool-free clip lock, which ensures fast and secure fastening. In addition, the clip features a robust, long-lasting design that makes it suitable for installation in a wide range of substrates, such as concrete, porous concrete, calcareous limestone, wood and steel.

Simply installed.

proQuick clips are unbelievably easy to install: They can be fastened directly to walls, ceilings or steel structures using anchors and bolts. Thanks to their special base contour, proQuick clips PQ-10 to PQ-32 can be screwed directly onto an M6 thread, and proQuick clips PQ-36 to PQ-59 directly onto an M8 thread. For installation on profile rails, the clip is simply slid onto the opening of the profile rail with a slot width of 11 mm.
